Estradiol (#252) - 252

Parameter	Result	Reference Range	Units
Estradiol	0.8		pg/mL

FEMALES:

Follicular Phase..... 1.0 - 5.0 PG/ML

Midcycle..... 3.0 - 8.0 PG/ML

Luteal Phase..... 1.0 - 5.0 PG/ML

Postmenopausal 0.5 - 3.0 PG/ML

Physiological Range.... 4.0 - 14.0 PG/ML

MALE:

1.0 - 3.0 PG/ML

Estradiol is the primary estrogen, produced in the ovaries and released by the egg follicles to trigger the rest of the reproductive cycle. It is an important modulator of hormone activity in both men and women, with numerous clinical applications, including fertility, obesity, sleep disorders, and sexual dysfunction.
