Estriol (#253) - 253

Parameter	Result	Reference Range	Units
Estriol	14.4		pg/mL

Female: 2 – 98 pg/ml Male: 0.5 – 40 pg/ml

Estriol is an oxidative product of estradiol and estrone, having relatively weak estrogenic activity. Estriol is the estrogen that is made in large quantities during pregnancy and has potential protective properties against the production of cancerous cells. Estriol is the estrogen most beneficial to the vagina, cervix and vulva.
