COLLECTED: _____ Clinical Info:
 RECEIVED: _____
 REPORTED: _____

Test Name	Result	Flag	Reference Range	Lab
-----------	--------	------	-----------------	-----

MMR (IGG) PANEL (MEASLES, MUMPS, RUBELLA)

MEASLES ANTIBODY (IGG)	4.26		index	01
------------------------	------	--	-------	----

Index	Explanation of Test Results
< or = 0.90	Negative - No Rubeola (Measles) IgG Antibody detected
0.91 - 1.09	Equivocal
> or = 1.10	Positive - Rubeola (Measles) IgG Antibody detected

Positive results suggest recent or previous infection with Measles (Rubeola) virus and imply immunity. Patients exhibiting equivocal results should be retested in one month, if clinically indicated.

MUMPS VIRUS ANTIBODY (IGG)	< OR = 0.90	ABNORMAL	index	01
----------------------------	-------------	----------	-------	----

Index	Interpretation
< or = 0.90	Negative
0.91-1.09	Equivocal
> or = 1.10	Positive

A positive result indicates that the patient has antibody to mumps virus. It does not differentiate between an active or past infection. The clinical diagnosis must be interpreted in conjunction with the clinical signs and symptoms of the patient.

RUBELLA ANTIBODY (IGG)	3.18			01
------------------------	------	--	--	----

Value	Interpretation
< or = 0.90	Not consistent with Immunity
0.91-1.09	Equivocal
> or = 1.10	Consistent with Immunity

The presence of rubella IgG antibody suggests immunization or past or current infection with rubella virus.
